

CREDITPUMP

CreditPump for MYOB Accounting Software

WHAT IS IT ?

CREDITPUMP is a software product that improves the efficiency of data entry into your MYOB Accounting file. CreditPump reads credit transactions from external bank files and updates the credits into your MYOB file. There are two update options:

- Process payments as Receive Money
- Process payments as Customer Payments

WHO IS IT DESIGNED FOR ?

CREDITPUMP is designed to be used by organisations who handle bulk credits into their bank accounts. These are often automatic payments made by Customers.

WHAT ARE ITS FEATURES ?

The user selects the type of external bank file – normally a QIF text file. If payments are to be processed as Customer payments a choice is selected for matching each customer. The options are by Reference, Particulars, Analysis Code, or by searching all three.

CREDITPUMP then reads the credits from the external file and updates the MYOB file. Where payments are being processed as Customer payments, a report is provided showing any credits where a customer match could not be found.

COMPUTER REQUIREMENTS

CREDITPUMP is a Windows product, with standard Windows features, including a full range of context-sensitive Help notes. Once registered, the demonstration version becomes the full working copy and can be used immediately. **CREDITPUMP** can be run on Mac computers using PC emulation software.

CAN NEW FEATURES BE ADDED ?

Further file formats may be added from time to time.. The cost will depend on the complexity of the report.
